

## The new ceramic stove

# Wallas 800D

The Wallas 800D Ceramic stove is for boaters who really enjoy cooking.

Our new single element stove is a stylish choice for your boat. It offers low maintenance and is the perfect solution for limited spaces.

The burner generates ultra-low emissions of NOx and CO2 thanks to the new GB burner system. It has been designed to work with future diesels that may include more renewable components.

Wallas ceramic diesel stoves protect your future boating environment; you don't need to worry about propane gas leakage or periodic safety checks.

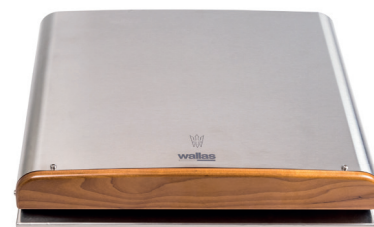

We suggest using 800D stove with the exclusive heater lid (available as accessory). You can simply close the lid after cooking to protect the hot surface and deliver controlled, warm, dry heat to your cabin.

Most older models of Wallas stoves are easy to replace with the new 800D, which is a direct replacement for several 800T stoves.

### Specifications

Model	800D
Fuel	Diesel
Power	950–1400 W
Operating voltage	12 V
Fuel consumption	0,10–0,15 l/h
Electricity consumption	Max 0.7 A

Safe | Easy | Environment friendly
